

INDIAN HEAD HATCHERY

# Expansion Project

## Why is Mowi planning this Project?

Expansion of the existing Mowi facility in Stephenville will provide a modern, more sustainable Recirculating Aquaculture System (RAS) for salmon smolt that:

- **Uses less water**  
(95% is reused)
- Reduces time farmed salmon spend at sea
- Increases production capacity
- Minimizes wastewater
- **Enhances biosecurity**
- Provides business stability
- Improves fish welfare
- Increases local economic benefits

These proposed changes in Mowi's operations have resulted in the provincial Department of Environment and Climate Change requiring an Environmental Impact Statement (EIS) for the Project. An important part of the EIS process is consulting with the **public, Indigenous groups, and stakeholders.**
